

CardioDx to Present at JMP Securities Healthcare Conference

PALO ALTO, Calif. – July 9, 2012 – CardioDx, Inc., a pioneer in the field of cardiovascular genomic diagnostics, today announced its participation at the JMP Securities Healthcare Conference to be held July 12-13 in New York.

Mark Monane, M.D., the company's chief medical officer, will provide an overview of CardioDx and of Corus[®] CAD, the first and only clinically validated gene expression test for obstructive coronary artery disease. The presentation will take place on Thursday, July 12 at 9:30 a.m. ET at the Peninsula Hotel.

With a simple blood draw, Corus CAD can help primary care clinicians and cardiologists exclude obstructive coronary artery disease as the cause of a stable non-diabetic patient's symptoms. It is the first gender-specific test for obstructive coronary artery disease, accounting for critical biological differences between men and women. The test is safe and does not expose patients to radiation risks or imaging agent intolerance.

Corus CAD has been recognized by *The Wall Street Journal's* Technology Innovation Awards, honored as a Gold Edison Award recipient, and named one of *TIME's* Top Ten Medical Breakthroughs.

About CardioDx

CardioDx, Inc., a pioneer in the field of cardiovascular genomic diagnostics, is committed to developing clinically validated tests that empower clinicians to better tailor care to each individual patient. Strategically focused on coronary artery disease, cardiac arrhythmia and heart failure, CardioDx is poised to expand patient access and improve healthcare quality and efficiency through the commercialization of genomic technologies.
